Z z	𝔷 𝔷	𝒵 𝓏

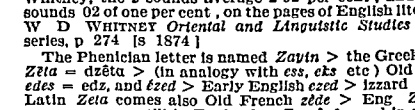
Z¹, z, 1 zī *or* (*Eng*) zed, 2 zĕ *or* (*Eng*) zĕd, *n* [ZEES, Z's, or *Zs*, 1 zīz, 2 zĕs, *pl*] **1.** A letter the twenty-sixth and last in the English alphabet It has two sounds that of a voiced s as in *zest, buzz*, and that of a voiced sh as in *azure* The former, the 'voiced supradental spirant' we denote in Key 1 by z, the latter, the 'voiced palatal spirant,' by ɟ For their phonetic character and relationships see under S



In the Latin alphabet *z* was used to transcribe the Greek ζ, which had the sound of *dz* In the course of time the letter came to be employed to some extent both for the voiced *dz* and for the voiceless *ts*, which latter is its usual value in German The Anglo-Saxons made but little use of *z*, either as *dz* or as *ts* When, therefore, in the Middle English period, the need of a separate letter for the voiced *s* began to be felt, *z* was available and came into extensive use *Glasen* became *glaze, dysy* became *dizzy*, etc But the substitution was never carried out thoroughly, *s* continued to be written in inflectional endings and in most (not all) words of Latin origin Hence, to-day, *goes* (not *goez*), *man s, foxes, rose, fuse, desire*, etc The *z* sound is written *s* far more often than it is written *z* For the suffix *-ize*, as used in America, British usage generally prefers *-ise*

The voiced palatal spirant ɟ results phonetically in numerous words from *z+y*, cf *azure* (*azyur*), *closure, division, fusion* In a few French words it is written *ge garage, prestige*

According to the examination made by Professor Whitney, the *z* sounds average 2 92 per cent, and the *zh* sounds 02 of one per cent, on the pages of English literature W D WHITNEY *Oriental and Linguistic Studies* second series, p 274 [s 1874]

The Phenician letter is named *Zayin* > the Greek, Latin *Zēta* = dzētα > (in analogy with *eks, eks* etc) Old French *edes* = edz, and *ézed* > Early English *ezed* > izzard From Latin *Zeta* comes also Old French *zède* > Eng *Zed*, the common name still in England *Ze*, zī, formed in analogy with *be, ce de*, etc, is the common name in America It was the seventh letter in Phenician, Greek, and Latin but dropped from Latin in the 3d century B C, and when it was restored to write Greek words in the 1st century B C it took its place at the end of the alphabet

The history of the character may be represented thus·

Zend, 1 zend, 2 zĕnd, *n* **1.** The Bactrian or eastern branch of the old Iranian group of Aryan languages. **Old Bactrian†. 2.** Originally, a commentary

The name *Zend* is frequently, tho wrongly, given to the language of the Avesta No name for the language of the Parsee scriptures has yet been found in the Parsee books Whenever the word *Zend* is used alone it means 'commentary,' and is applied to some Pahlavi translation, commentary, or gloss and whenever the word *Avesta* is used alone it is applied to the Parsee scriptures in the original tongue

The original language of the Parsi scriptures has usually been called *Zend* by European scholars but this name has never been generally admitted by Parsi scholars For want of a better term, we may follow the example of most Parsi scholars in using the term Avesta for the language of the Avesta

Scientific *zoology* really started in the 16th century but for a long time ran a separate course uninfluenced by the progress of the medical studies of anatomy and physiology Whilst the race of collectors and systematizers culminated in the latter part of the 18th century in Linnæus a new type of student made its appearance in such men as John Hunter and other anatomists who set themselves to work to examine anatomically the whole animal kingdom and to classify its members by aid of the results It was not until the 19th century that the microscope, thus early applied by Leeuwenhoek Malpighi, Hook and Swammerdam to the study of animal structure was perfected

The perfecting of the microscope led to a full comprehension of the great doctrine of cell-structure

DISPUTED PRONUNCIATIONS.

THE SELECTION of the terms included in this list was made with the main purpose of including those words in common speech in the correct pronunciation of which some differences exist. Words that are seldom spoken, or met with only in books, have no established pronunciation, being spoken or read occasionally as analogy or principle indicates. They are mostly omitted here. The late Prof W W SKEAT, writing to the Editor on this subject, said "Many of these words are *mere* dictionary words and the only real words are those that are actually in living use I have never once, in the course of more than 70 years, *heard* the words *aam, abactinal, abeigh* [I have *read* it!], *abele, acaulose, absolutory.* I have never before either seen or heard of *abrus,* and I hold firmly to the belief of Dr. A J. ELLIS, viz, that 'no one can tell how to pronounce an English word unless he has at some time or other *heard* it' It would be extremely dishonest in me to pretend to have any opinion at all as to such words as these."

The NEW STANDARD DICTIONARY assumes that correctness in pronouncing — like correctness in diction in general — depends upon the **consensus of usage.** The correctness of English pronunciations should obviously be determined by the best and widest usage among the English-speaking peoples. To a mode of pronouncing a word that is general among the educated classes of all these peoples, no exception properly can be taken, and any form of orthoepy that prevails among some of these peoples should command the recognition of lexicographers. Even forms that are used by a few only of the greater speakers may sometimes call for consideration at least, and possibly for record One recognized aim of a dictionary is to ascertain and record the facts of English usage in pronouncing, while at the same time indicating what it regards as the best usage.

Committee on Disputed Pronunciations.

In this work a systematic attempt has been made to ascertain the **consensus of usage** throughout the English-speaking world, by selecting from scholars and professors of all the great centers of English civilization an Advisory Committee of twenty-five persons, to serve as witnesses to give testimony regarding the usage in those centers, and as a jury to decide upon rival claims in disputed cases

Record of the Consensus of English Usage.

Disputed pronunciations have been referred to this Advisory Committee, composed of prominent educators in the United States, the British Isles, Canada, South Africa, Australia, and India By a simple system, the forms preferred by each member of the Committee and those preferred by the leading dictionaries are given in the following pages This system, it is thought, furnishes a most comprehensive, intelligent, and authoritative presentation of correct pronunciation — in fact, a consensus of the best judgment of the English-speaking world It covers the general or common words regarding whose pronunciation the modern dictionaries differ

Preferences of the Dictionaries.

The first respelled pronunciation in each case indicates the preference of this Dictionary, and represents the decision reached by the editor in charge of this department, after examining the pronunciations recorded by other dictionaries and books of reference, and comparing and weighing the evidence thus collected The pronunciations that follow the forms preferred by this Dictionary are taken from other dictionaries or given upon the authority of members of the Advisory Committee. The dictionaries whose preferences are given are indicated by abbreviations, as follows:

C Century	*I* New Imperial	*S* Stormonth	*Wr* Worcester
E Encyclopædic (Hunter's).	*M* Murray (New English).	*W* Webster (International)	

The small numerals following the italic letters, as C^1, C^2, M^1, M^2, indicate the order of choice of the authorities cited

Preferences of the Committee.

In giving the preferences of the Advisory Committee, in order to save space and at the same time to secure completeness in embodying the consensus of usage, Arabic numerals are used to represent the names of the members of the Committee; as, **abatis,** ab'ə-tis, 1, 3, etc, instead of **abatis,** ab'ə-tis, W. J Alexander, P P. Claxton, etc. (See the following page)

Technical Names.— The pronunciations of geographical and chemical names and terms, and of technical terms generally, were not referred to the Advisory Committee.

The pronunciations of technical terms, as in zoology, botany, chemistry, and the trades, have been decided upon after consultation with distinguished representatives of the various departments of science and art and the trades

(For further particulars, see Introductory.)

RULES FOR THE SIMPLIFICATION OF SPELLING.

THE following rules, approved by the SIMPLIFIED SPELLING BOARD and recommended for immediate use, are reprinted from Circular No 23, issued by the Board.

"Rule" here means simply a recommendation that applies to a number of words having the same irregularity of spelling. In some cases the rule is restricted to a limited number of words in the class. Any one who chooses to extend the rule at once to all the words of a given class is of course free to do so

After each rule is given a list, either of all the words affected (if they are not many), or of all the words mentioned in the original rule, or of a few examples of the large number covered by the rule In the latter case "Ex." ("Examples") is prefixed, and "etc." is added. If the official recommendation applies to all words containing the *letter, sequence of letters, or suffix affected, in the pronunciation* indicated, the word RULE is printed in capitals. FOREWORD

"A STANDARD HISTORY OF THE WORLD" is designed as a finger-post to the history of ancient and modern times It affords speedy access to notable events and occurrences which have happened in all parts of the world on every day of the year from January 1st to December 31st Thus, it is hoped that the information it affords may prove of value to students of history, to public men in all walks of life as well as to the general reader. Used intelligently, it will serve as a rich source of information in the preparation of a discourse, a sermon, or a public address, and, it is hoped, will therefore be found of great utility by all persons who have occasion to speak in public. The character of the contents may be briefly stated as biographical and historical in the widest sense The events recorded relate to persons, places, and things. Events of the occurrence of which the exact date of the month in which they occurred is not known will be found arranged chronologically by the year at the end of each month. Much additional information may be found in the main vocabulary, in groups, as, for instance, under *author, battle, era, feast,* etc , or in the specific alphabetical place of the person or place under investigation. The system of Chronology followed is explained in the Introductory. See p. xix.
